

## Use case "Place order"

### Basic flow

1. System displays order form (order information, delivery information ...)
2. Customer enters and submits order information

### Alternative flow

1. If customer chooses to place a rush order, insert use case "Rush order"

## Use case "Check validate"

### Basic flow

1. Check validate input information

### Alternative flow

1. If info is not valid, add use case "Save history process" and then calls to use case "Notification"
